# **Mark Scheme**

2010 Examination – June Series

Mark schemes are prepared by the Principal Examiner and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation meeting attended by all examiners and is the scheme which was used by them in this examination. The standardisation meeting ensures that the mark scheme covers the candidates' responses to questions and that every examiner understands and applies it in the same correct way. As preparation for the standardisation meeting each examiner analyses a number of candidates' scripts: alternative answers not already covered by the mark scheme are discussed at the meeting and legislated for. If, after this meeting, examiners encounter unusual answers which have not been discussed at the meeting they are required to refer these to the Principal Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of candidates' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this Mark Scheme are available to download from the AQA Website: www.aga.org.uk

# Marking Guidance for Examiners GCSE Science Papers

#### 1. General

The mark scheme for each question shows:

- the marks available for each part of the question
- the total marks available for the question
- the typical answer or answers which are expected
- extra information to help the Examiner make his or her judgement and help to
  delineate what is acceptable or not worthy of credit or, in discursive answers, to give
  an overview of the area in which a mark or marks may be awarded.

The extra information is aligned to the appropriate answer in the left-hand part of the mark scheme and should only be applied to that item in the mark scheme.

At the beginning of a part of a question a reminder may be given, for example:

where consequential marking needs to be considered in a calculation;

or the answer may be on the diagram or at a different place on the script.

In general the right hand side of the mark scheme is there to provide those extra details which confuse the main part of the mark scheme yet may be helpful in ensuring that marking is straightforward and consistent.

#### 2. Emboldening

- In a list of acceptable answers where more than one mark is available 'any **two** from' is used, with the number of marks emboldened. Each of the following lines is a potential mark.
- 2.2 A bold **and** is used to indicate that both parts of the answer are required to award the mark.
- 2.3 Alternative answers acceptable for a mark are indicated by the use of or. (Different terms in the mark scheme are shown by a /; eg allow smooth / free movement.)

#### 3. Marking points

#### 3.1 Marking of lists

This applies to questions requiring a set number of responses, but for which candidates have provided extra responses. The general principle to be followed in such a situation is that 'right + wrong = wrong'.

Each error/contradiction negates each correct response. So, if the number of error/contradictions equals or exceeds the number of marks available for the question, no marks can be awarded.

However, responses considered to be neutral (indicated as \* in example 1) are not penalised.

Example 1: What is the pH of an acidic solution? (1 mark)

Candidate	Response	Marks awarded
1	4,8	0
2	green, 5	0
3	red*, 5	1
4	red*, 8	0

Example 2: Name two planets in the solar system. (2 marks)

Candidate	Response	Marks awarded
1	Pluto, Mars, Moon	1
2	Pluto, Sun, Mars, Moon	0

#### 3.2 Use of chemical symbols / formulae

If a candidate writes a chemical symbol / formula instead of a required chemical name, full credit can be given if the symbol / formula is correct and if, in the context of the question, such action is appropriate.

#### 3.3 Marking procedure for calculations

Full marks can be given for a correct numerical answer, as shown in the column 'answers', without any working shown.

However if the answer is incorrect, mark(s) can be gained by correct substitution / working and this is shown in the 'extra information' column;

#### 3.4 Interpretation of 'it'

Answers using the word 'it' should be given credit only if it is clear that the 'it' refers to the correct subject.

#### 3.5 Errors carried forward

Any error in the answers to a structured question should be penalised once only.

Papers should be constructed in such a way that the number of times errors can be carried forward are kept to a minimum. Allowances for errors carried forward are most likely to be restricted to calculation questions and should be shown by the abbreviation e.c.f. in the marking scheme.

#### 3.6 Phonetic spelling

The phonetic spelling of correct scientific terminology should be credited **unless** there is a possible confusion with another technical term.

#### 3.7 Brackets

(....) are used to indicate information which is not essential for the mark to be awarded but is included to help the examiner identify the sense of the answer required.

question	answers	extra information	mark
<b>1</b> (a)	white to blue	accept colourless to blue	1
<b>1</b> (b)	reversible		1
Total			2

question	answers	extra information	mark
<b>2</b> (a)(i)	nucleus		1
<b>2</b> (a)(ii)	neutron		1
<b>2</b> (a)(iii)	electron		1
<b>2</b> (b)(i)	6		1
<b>2</b> (b)(ii)	12		1
<b>2</b> (c)	14		1
	С		
	6		
<b>2</b> (d)(i)	CH <sub>4</sub>		1
<b>2</b> (d)(ii)	compound		1
<b>2</b> (d)(iii)	covalent		1
Total			9

question	answers	extra information	mark
<b>3</b> (a)	the glow stick is brighter (owtte)	accept glow stick is less bright at low temperatures (owtte)	1
		ignore references to rate / particles	
<b>3</b> (b)	gave out light for less time	accept use of figures from table for comparison	1
		allow reference to speed / rate eg quicker / faster reaction	
<b>3</b> (c)	the particles will collide more often		1
	the particles will move faster		1
	the particles will have more energy		1
<b>3</b> (d)	any one from:		1
	repeat	allow more glow sticks	
	measure brightness eg use light meter		
	more temperatures <b>or</b> wider range		
	improve precision		
Total			6

question	answers	extra information	mark
<b>4</b> (a)	carbon		1
<b>4</b> (b)	all		1
<b>4</b> (c)	covalent		1
<b>4</b> (d)	four		1
<b>4</b> (e)	hard		1
Total			5

question	answers	extra information	mark
<b>5</b> (a)(i)	precipitation		1
<b>5</b> (a)(ii)	filtration		1
<b>5</b> (a)(iii)	lead nitrate		1
	sodium iodide		1
<b>5</b> (b)		sharing / covalent / metallic = max	
	<ul><li>any four from:</li><li>magnesium (atom) reacts with</li></ul>		4
	two iodine (atoms)		
	magnesium (atom) loses		
	• 2 electrons		
	iodine (atom) gains		
	1 electron or an electron	allow iodine ion	
	iodide ion formed	allow iodine	
	iodide has negative charge /     is a negative ion / particle	ignore I <sup>2-</sup>	
	magnesium ion formed		
	magnesium has positive charge		
	oppositely charged ions attract		
	a giant structure / lattice is formed	if reference to ions being formed is made unqualified, allow 1 mark	
Total			8

#### Question 6

question	answers	extra information	mark
<b>6</b> (a)(i)	(nitrogen) + hydrogen → ammonia	accept H <sub>2</sub> and NH <sub>3</sub>	1
		ignore incorrect symbols	
		ignore balancing	
<b>6</b> (a)(ii)	any <b>one</b> from:		1
	• catalyst		
	to speed up the reaction	ignore causes reaction	
		ignore heat / reference to particles	
	lower activation energy		
<b>6</b> (a)(iii)	any <b>two</b> from:	it = ammonia	2
	• cooled		
	<ul> <li>ammonia condenses / turns into liquid</li> </ul>	ignore references to boiling point	
	<ul> <li>nitrogen and hydrogen do not condense / turn into liquid</li> </ul>		
	or		
	nitrogen and hydrogen stay as gases		
		if no marks awarded accept pass through / separated in condenser or unreacted nitrogen and hydrogen / gases recycled for 1 mark	

Question 6 continues on the next page

#### **Question 6 continued**

question	answers	extra information	mark
<b>6</b> (b)	80	correct answer with or without working gains 2 marks	2
		ignore units	
		if answer incorrect, evidence of correct working gains 1 mark	
		eg	
		14 + (4 x 1) + 14 + (3 x 16) (= 70)	
		or	
		2N + 4H +30	
<b>6</b> (c)	fertiliser is C		1
	evidence of correct working	examples of minimum correct working:	1
		39/101	
		or	
		14/101	
		or	
		38.61/100	
		or	
		13.86/100	
Total			8

#### Question 7

question	answers	extra information	mark
<b>7</b> (a)(i)	(different) properties	allow ideas of different property / behaviour / element	1
<b>7</b> (a)(ii)	any <b>one</b> from:  they had high status	they = Crawford + Cruikshank	1
	they were lecturers / doctors / professors / famous scientists		
	other scientists repeated experiments	allow experiment could be repeated allow other scientists showed they had different properties	
	they had proof		
	or lots of / strong / conclusive / enough / clear evidence	ignore evidence unqualified	
<b>7</b> (a)(iii)	other scientists obtained similar results / proved it		1
	or		
	experiments were repeated	Question 7 continues on the ne	

Question 7 continues on the next page

#### **Question 7 continued**

question	answers	extra information	mark
<b>7</b> (b)(i)	<ul><li>any one from:</li><li>mass of solid / strontium (chloride) / barium (chloride)</li></ul>	allow amount / volume	1
	volume of water	allow amount / mass	
	type of container	allow initial / starting temperature (of water)	
		ignore room temperature / time / concentration	
		ignore reference to hydrochloric acid	
<b>7</b> (b)(ii)	2 and takes in heat / energy		1
	or		
	2 <b>and</b> temperature goes down (owtte)		
<b>7</b> (b)(iii)	temperature increased for one experiment and decreased for the other (owtte)		1
	or		
	one was exothermic and one was endothermic (owtte)	accept experiment 1 was exothermic	
<b>7</b> (c)	any <b>one</b> from		1
	• positive / + (charge)	do <b>not</b> accept incorrect further qualification eg electrons / atoms / electrodes	
	opposite (charges) attract		
Total			7
